Jira Ticket 2 - Test Results

Overview	
Ticket Scope	Implemented frontend API integration structure, reusable API helpers, error handling UI, loading states, unauthorized pages, document preview UI, download workflow, mock API support, and frontend UX enhancements.
Frontend Stack	React.js, Vite, API Utility Layer, Protected Routing, Responsive CSS, Notification System, and PDF Preview Components.
Testing Method	Manual frontend UI testing, API integration validation, loading/error scenario testing, responsive layout inspection, and document preview/download verification.
Overall Result	PASS - Frontend integration preparation, loading/error handling, document preview, and UX enhancement workflow completed successfully.

Test Area	Expected Result	Actual Result	Status
Frontend API Structure	Frontend API layer should be modular and reusable.	Reusable API helper functions worked correctly for frontend requests.	PASS
Loading Indicators	Loading states should display during requests.	Loading spinners and loading states displayed correctly.	PASS
Safe Error Handling	Safe frontend error messages should appear.	Frontend displayed safe validation and API error alerts.	PASS
Unauthorized Access Page	Unauthorized page should render correctly.	Unauthorized access handling worked properly.	PASS
Fallback UI	Fallback UI should appear safely.	Fallback components rendered correctly during failed requests.	PASS
Empty-State UI	Empty-state UI should display correctly.	Empty-state messages rendered successfully.	PASS

Test Area	Expected Result	Actual Result	Status
Document Preview Page	Document preview page should display correctly.	Frontend displayed generated document previews successfully.	PASS
Download Interface	Download buttons should function correctly.	PDF/document downloads worked successfully.	PASS
Frontend Notifications	Notification messages should appear properly.	Frontend alert and notification system worked correctly.	PASS
Mock API Support	Mock API testing flow should function correctly.	Frontend mock API support worked during testing.	PASS
Responsive Layout	Responsive layout should work across devices.	Responsive frontend behavior worked correctly.	PASS
Frontend Integration Readiness	Frontend should support future backend integration safely.	Frontend structure prepared successfully for backend integration.	PASS

Result Summary

Frontend Ticket 2 passed all manual testing workflows successfully. Reusable API integration structure, loading/error handling, document preview/download systems, responsive layouts, notification handling, and mock API support all worked as expected.
