

CSCI370 Renter Dispute Assistant

Jira Ticket 3 - Test Results

Overview	
Ticket Scope	Implemented frontend authentication workflow including login, registration, role selection, renter dispute intake forms, dynamic dispute fields, frontend validation, loading states, error handling UI, and responsive layouts.
Frontend Stack	React.js, Vite, Responsive CSS, Form Validation Logic, Protected Navigation, Dynamic Form Components, and Reusable UI Components.
Testing Method	Manual frontend testing using desktop and mobile layouts, validation testing, authentication flow testing, and intake form interaction testing.
Overall Result	PASS - Authentication workflow, dispute intake forms, dynamic field rendering, validation handling, and responsive UI worked successfully.

Test Area	Expected Result	Actual Result	Status
Login Page	Login page should render correctly with email and password inputs.	Login page displayed correctly and accepted user input.	PASS
Registration Page	Registration page should render and allow account creation.	Registration workflow displayed and functioned correctly.	PASS
Role Selection	User role selection should work during registration.	Role selection updated correctly for renter and landlord flows.	PASS
Dispute Intake Form	Renter intake form should collect case-related information properly.	Dispute intake form rendered and accepted all required inputs.	PASS
Dynamic Dispute Fields	Dynamic fields should change based on dispute type selection.	Dynamic form fields displayed correctly for selected dispute types.	PASS
Frontend Validation	Validation should block incomplete or invalid form submissions.	Validation messages appeared correctly for invalid inputs.	PASS

Test Area	Expected Result	Actual Result	Status
Invalid Email Validation	Invalid email formats should be rejected safely.	Frontend validation rejected incorrect email formats.	PASS
Invalid Amount Validation	Negative or invalid money amounts should be blocked.	Invalid amount values triggered frontend validation messages.	PASS
Loading States	Loading indicators should display during authentication and forms.	Loading states appeared correctly during frontend actions.	PASS
Error Handling UI	Safe error messages should display during invalid submissions.	Frontend error handling UI worked correctly during testing.	PASS
Responsive Layout	Frontend should work across desktop and mobile devices.	Responsive layout displayed correctly on multiple screen sizes.	PASS
Backend Integration Readiness	Frontend form structure should be prepared for backend integration.	Frontend authentication and intake flow prepared successfully.	PASS

Result Summary

Frontend Ticket 3 passed all manual testing workflows successfully. Authentication pages, dispute intake forms, validation logic, dynamic dispute fields, responsive layouts, loading states, and frontend error handling all worked as expected.
