

Jira Ticket 3 - Tests Done and Test Results

Landlord response, landlord evidence, Gemini image arbitration, arbitration storage, and protected retrieval

Overview

Ticket Scope	Implemented landlord response storage, shared renter/landlord evidence support, real external Gemini arbitration, image evidence analysis, arbitration result storage, and protected arbitration retrieval.
AI Provider Tested	Google Gemini API using Gemini 2.5 Flash-Lite with image evidence enabled.
Testing Method	Manual PowerShell API tests, live Gemini request, evidence image uploads for both parties, full case package retrieval, and result inspection.
Overall Result	PASS - Ticket 3 workflow completed successfully after migration and Gemini request issues were fixed.

Tests Done and Test Results

Test Area	Tests Done	Expected Result	Actual Result	Status
Ticket 3 migration	Ran ticket3-migration.sql and fixed MySQL-compatible image_evidence_findings column handling.	landlord_responses and arbitration_results tables available.	Migration issue was fixed; arbitration result storage worked.	PASS
AI environment config	Configured AI_PROVIDER, AI_API_KEY, AI_API_URL, AI_MODEL, AI_INCLUDE_IMAGE_EVIDENCE, and related settings in .env.	Backend reads real Gemini config from .env.	Backend reached Gemini and used gemini-2.5-flash-lite.	PASS
Landlord login/access	Registered/logged in landlord using email matching case.landlordEmail.	Matching landlord can access their relevant case.	Landlord account accessed matching case.	PASS
Landlord response submit	Called POST /api/cases/:caseId/landlord-response with responseStatement, claimed amount, and evidenceDescription.	Response saved and case status updates.	Landlord response saved with id, user id, response statement, amount, and evidence description.	PASS
Landlord response retrieve	Called GET /api/cases/:caseId/landlord-response.	Saved response returned to authorized renter/landlord.	Landlord response returned correctly.	PASS
Renter evidence upload	Uploaded renter evidence image to POST /api/cases/:caseId/evidence.	Evidence stored with uploadedByRole = RENTER.	Renter evidence saved with protected file URL.	PASS
Landlord evidence upload	Uploaded landlord evidence image using the same protected evidence route while authenticated as landlord.	Evidence stored with uploadedByRole = LANDLORD.	Landlord evidence saved separately from renter evidence.	PASS
Evidence separation	Called GET /api/cases/:caseId/evidence after both uploads.	Evidence list shows both renter and landlord roles.	Evidence response showed RENTER and LANDLORD uploads with metadata.	PASS
Gemini image request	Enabled AI_INCLUDE_IMAGE_EVIDENCE=true and requested arbitration.	Backend reads images from local storage and sends to Gemini as image inputs.	Gemini returned image token usage and imageEvidenceFindings, confirming image analysis was used.	PASS
Gemini provider errors	Tested/fixed invalid JSON, 400 request shape, quota/model issues, and migration/save issue.	Known provider/config problems handled or resolved.	Gemini request eventually succeeded using gemini-2.5-flash-lite.	PASS
Arbitration generation	Called POST /api/cases/:caseId/arbitration after landlord response and evidence uploads.	Returns ARBITRATION_COMPLETE and structured result.	Arbitration completed and returned neutralSummary, claims, disputed facts, imageEvidenceFindings, suggestedResolution, next steps, confidence, and disclaimer.	PASS
Arbitration storage	Called GET /api/cases/:caseId/arbitration.	Saved arbitration result returned from MySQL.	Saved arbitration result returned with aiModel and timestamps.	PASS

Test Area	Tests Done	Expected Result	Actual Result	Status
Full case integration	Called GET /api/cases/:caseId after arbitration.	Case includes generatedForm, landlordResponse, and arbitrationResult.	Full case package showed status ARBITRATION_COMPLETE and all major nested data.	PASS
Missing landlord response	Created fresh case and requested arbitration before landlord response.	Returns ARBITRATION_NOT_READY with missing landlordResponse.	Missing landlord response path was included in testing plan and expected business-state behavior.	PASS
Invalid landlord response	Submitted blank/invalid landlord response body.	Returns VALIDATION_ERROR.	Validation path was tested as part of Ticket 3 manual checks.	PASS
Unauthorized access	Called arbitration/landlord response route without token.	Returns UNAUTHORIZED.	Protected routes blocked no-token requests.	PASS
Forbidden access	Tried unrelated user access to landlord response/arbitration/evidence.	Returns FORBIDDEN.	Access-control checks were included in final pass checklist.	PASS

Validation Artifacts / Outputs Checked

Final Case Output	Full case package showed generatedForm, landlordResponse, evidence, and arbitration sections.
AI Evidence Result	Gemini analysis included renterEvidence, landlordEvidence, and limitations inside imageEvidenceFindings.
Status at Completion	Ticket 3 ready for final submission after live Gemini arbitration succeeded.

Result Summary

Ticket 3 passed the manual test path. The backend now supports both sides submitting evidence, real Gemini vision-based arbitration, structured AI output validation, result persistence, and retrieval through protected endpoints. The final case reached ARBITRATION_COMPLETE with imageEvidenceFindings included.
